OXY-LIGHT SPA™

AlphaTM LED LIGHT-SPATM

What Is The AlphaTM LED Light-SpaTM?

AlphaTM LED Light-SpaTM is a whole body LED light therapy spa capsule. It provides new and advanced body treatments.

What Does The AlphaTM LED Light-SpaTM Do?

AlphaTM LED Light-SpaTM allows the choice of any combination of three (3) forms of energy for a whole body treatment.

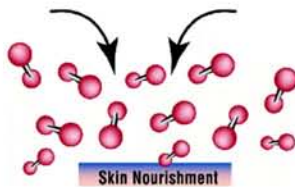

- 1) LED Light Energy
- 2) Thermal (Heat) Energy
- 3) Vibration Energy

AlphaTM LED Light-SpaTM also offers additional therapeutic options such as aromatherapy, music and cool face air.

Alpha LED Oxy-Light Spa Benefits:

Oxygen replenishment is key to a young, fresh appearance. Rejuvenation, via increased oxygen levels, encourages healthy cell composition, mental alertness, increases physical stamina, and a boost to your immune system.

We have more than seven (7) trillion cells in the human body. Published research has shown that increasing the oxygen level in these cells has been shown to has long term health benefits.

LED Light-OxyThermal Therapy:

LED Light-OxyThermal Therapy is a proprietary anti-aging treatment method that can be performed only with the Alpha LED OxyLight-Spa capsule. LED-OxyThermal Therapy is the combination of light, oxygen, and heat. It facilitates acceleration and the deep and rapid infusion of topically applied products to the skin. Targeted results are improved 50%-200% via the various combinations of cosmetic product, LED light, oxygen, and heat energies.

What Are The Benefits?

LED light increases the penetration depth and absorption of cosmetic products to improve your treatment results by up to 200%! LED wavelengths have different properties, penetration depths and benefits.

Thermal (heat) energy increases and stimulates the metabolism and detoxifies the skin for healthier tissue and new cell growth.

Vibration energy relaxes muscles, reduces stress and relieves pain.

How Does LED Light Therapy Work?

LED light therapy is a form of non-invasive, holistic energy, which stimulates structures in the skin at the cellular level. Over the course of a spa program or treatment plan, LED light improves and changes skin cells according to the properties of the different wavelengths.
